

ALREADY PORTABLE

The new maiCAM180 dual detector cardiac camera is small enough to be taken on the road! Our custom designed van with a rear liftgate makes transportation of this camera to your imaging location a breeze. Since the camera is also portable, a single person can move it from the van to your office, and back. An optional maiCADDY and connector designed specifically for the maiCAM180 is also available.

maiCAM180

With a footprint of just 30" x 56" and its patient friendly upright imaging design, this camera will easily fit in your practice. In fact, the maiCAM180 is the smallest conventional dual detector camera available.

The maiCAM180 rolls through standard doorways, fits in most elevators, and can be quickly deployed. Move it out of the way when not in use, or transport it to other locations. The large swivel casters allow for easy maneuverability of the system even on a carpeted floor. The optional maiCADDY motorized transport device further reduces the effort to move the camera over longer distances and ramps.

ALREADY COMPATIBLE

The maiCAM180 camera is a complete and integrated system. The acquisition console, UPS system, ECG gate, monitor, and keyboard are all part of the camera, so the entire system can be moved as a single piece. In addition, the maiCAM180 is already compatible with any DICOM based, web viewing network or PACS system.

Gamma cameras are sensitive instruments; however, this camera is purposely designed for both fixed and mobile operation modes. There is absolutely no need for concern when operating the maiCAM180 as a portable camera. The built-in UPS system keeps the photomultiplier tubes energized at all times. A unique detector rotation mechanism keeps the center of rotation in alignment. The simplicity and robustness of the maiCAM180 design makes this camera distinctly different from all other cameras.

ALREADY CONFIGURED

With the maiCAM180, we provide the portability solution. Our camera is configured for portability to include our pre-tested van that will offer any option that can be tailored to meet your individual requirements. The maiCAM180 is the most efficient and economical cardiac camera on the market, regardless of your mode of operation. Thanks to the unique portability features of this camera, it is your best choice when considering mobile operation, now or in the future. The beauty of this camera is that none of the mobility features compromise operation of the camera.
